

MIG21 Mapping

Seminar Contents

MIG21 Mapping represents the data interface to different source systems. During the two-day seminar the participants will be introduced to the basic principles of the data supply and the integration of different information sources. They will learn to understand and execute the mapping of classes, attributes and domains and will get to know methods for error analysing and handling. Moreover, the participants will have the possibility to discuss examples from their own system environment and develop solutions within the group.

Topics

MIG21 Data supply
